

Cashmere

Cashmere, the softest night

Cashmere – also spelt Kashmir – means softness, lightness and pure luxury. A truly natural product that

fully deserves its place in our product line. Cashmere has excellent moisture and heat regulating properties. This type of wool can absorb high quantities of moisture from the air (up to 40%) without feeling damp itself. The fiber properties remain unchanged up to a moisture content of 17%. Cashmere wool insulates very well against the cold. This is because the tightly curled fibers trap a lot of air. Such a natural layer of still air is the best possible form of natural insulation. Cashmere wool is naturally very resilient; the reason why cashmere fabrics feel so soft. Cashmere fiber is also extremely elastic and can be stretched by up to 30 to 40% without breaking.
